Georgia Hardwoods Inc

Radius Moulding Order Form

Arch Moulding Kits from Georgia Hardwoods to complete your radius moulding challenges. The kit will be built from the fewest number of pieces possible. Radius moulding profiles can be run from all of our available flat knife profiles. These include bases, casings, panel moulds, chair rails and other assorted trims. Complicated multi-knife profiles such as bar rail (GH805 and GH805A) and corners (GH204, GH205 and GH206) can not be radiused. The size limits are 3-3/4" tall x 8" wide. Crown mouldings 4" and under can be machined for convex and concave radiused walls.

There are 4 type of radius mouldings, True, Eyebrow, Ellipse and Arched. True and Eyebrow require only the diameter and or rise dimensions. The Ellipse and Arched radius require full scale templates. The template width must be the same as the profile and the radii of the template must maintain the same width. Please specify if you are using a keystone in your radius moulding to reduce the number of pieces. Please specify if this raduis kit needs to match straight lengths from stock. It is recommended that the straight lengths be ordered with the radius kit to ensure an exact fit.

Radius kits are quoted complete and take 7-10 business days to complete. Rush jobs available with a 25% surcharge. Kits manufactured with non stocked woods require an additional 5 working days.
